Puppet I

Tuesday, August 30, 2016 1:00 PM (5 hours)

Puppet is today the leading configuration management system. It allows to represent and to control the complete infrastructure of complex IT environments.

In this course we will learn what Puppet is and how to use it. We will start to write simple examples and understand how the Puppet workflow could look like. We will also have a look in the surrounding ecosystem git, foreman and hiera. And will show how continous integration could help us to develop our sites.

Presenters: NILSEN, Dimitri (KIT); Dr WEBER, Pavel (KIT); STERNBERGER, Sven (DESY)
