## SDC4Lit: Science Data Center for Literature

Has it ever happened to you - you try to access some web page that you visited one year ago, but it is not available any more? Or you want to investigate digital manuscripts created by your favourite writer, but visiting the archive is currently not possible? The Science Data Center for Literature (SDC4Lit) aims to establish a virtual data center for collection, preservation, cataloging, research and sharing of digital literary sources using computational methods to allow simple and even remote work with original materials. The main goals and challenges of the project will be covered in this presentation and in the following poster.

**Presenter:** KUSHNARENKO, V.

**Session Classification:** bw2FDM + Science Data Centers (SDC)
