

New interface for continuous processes

M. Reininghaus
2022-05-05

Step class

- `Step(particle, track)`
- `getKineticEnergyPre()`, `getKineticEnergyPost()`
- `setKineticEnergyPost()`
- the same for direction, time, position
- `getParticle()` → PID, weight, node, ...
- `getInitialTrajectory()`

Continuous processes

- ~~doContinuous(particle, track)~~ →
doContinuous(Step [const]&)
- no distinction between modifying/read-only yet
- new method observe(Step **const**&)?
