Experience/Lessons learnt during DTE2 in AGHS

Thursday, May 25, 2023 9:00 AM (30 minutes)

JET has recently completed the second Deuterium/Tritium Campaign at JET (DTE2). Initiated in September 2020, it was the first experimental campaign since 2003, and the first major one since DTE1 in 1997. This has induced a lot of challenges for the Tritium Innovation Unit members, in charge of the recommissioning and operation of the Active Gas Handling System (AGHS). This presentation will present these challenges as well as some lessons learnt.

Author: LEFEBVRE, Xavier

Co-author: THE AGHS SHIFT TEAM MEMBERS

Presenter: LEFEBVRE, Xavier

Session Classification: Tritium processing (experience and lessons learned)

Track Classification: Oral presentations
