Commercialization of Fusion Reactors

Thursday, May 25, 2023 4:10 PM (25 minutes)

Public funded fusion experiments have stalled in recent years for several reasons. ITER is around 10 years away and Demo around 30 years. This timeline brings commercial fusion power plants to the grid by the end of this century.

Private fusion companies closing this gap and their mission is to provide commercial clean, sustainable and low carbon energy to the grid much earlier.

Tokamak Energy was founded in 2009 and has a road map to a pilot power plant in the 2030s.

Author: ROMANELLI, Sandra (CEng MIET)

Presenter: ROMANELLI, Sandra (CEng MIET)

Session Classification: Fusion start up and tritium

Track Classification: Oral presentations
