## Overview of Private Fusion Efforts

*Thursday, May 25, 2023 3:35 PM (10 minutes)*

There is growing excitement about fusion energy as an option to contribute to the world's low-carbon energy supply. Increasing numbers of private companies are aiming to deliver commercial fusion and are producing significant breakthroughs in the science and technology that will lead to a commercial power plant.

The Fusion Industry Association (FIA) is the unified voice of the fusion industry, working to transform the energy system with commercially viable fusion power. Founded as an initiative in 2018, the FIA has already made its mark in Washington and around the world. As it expands, the FIA will support the creation of a new industry that will change the world.
