Bread and Butter Physics

Tuesday, March 28, 2023 11:00 AM (1 hour)

The talk will cover the most recent development in the field of electroweak precision physics at the Large Hadron Collider. Special emphasis will be placed on the measurement of the W boson mass at the ATLAS experiment and its tension to the latest result of CDF. However, maybe the talk will be on axion-like particle searches at the LHC and beyond. The final choice depends on the properties of bread and butter.

Presenter: SCHOTT, Matthias
