

AP3: Visualisation

Nicholas Tan Jerome, Andreas Kopmann

Institute for Data Processing and Electronics (IPE), Karlsruhe Institute of Technology, Germany

Visualisation Work Packages (Recap)

1. Data management system that manages the preprocessing of the visualization input data structure.
2. Automatic adaptation on visualization parameter, i.e. opacity, grey value threshold, transfer function, ROI, orientation, ...).
3. Multimodality visualization.
4. Using segmented dataset as mask to show partial visualization.
5. Feature extraction from segmented dataset.

Outline

1. WAVE: Visualisation Service [WP1]
2. Real-time Noise Filtering in CT Volumes [WP2]
3. Virtual Reality
4. Data Repository Page (Fossils)
5. Where do we currently stand?

1. WAVE: Visualisation Service

Challenges:

- Visual Quality
- Bandwidth Limitation
- Parameter Definition

1. WAVE: A 3D Online Previewing Framework for Big Data Archives, Visual Analysis of Dynamic Processes (VISA), Rigi-Kulm, Switzerland - 9th-11th January 2017.

2. WAVE: A 3D Online Previewing Framework for Big Data Archives, In Proceedings of the 12th International Joint Conference on Computer Vision, Imaging and Computer Graphics Theory and Applications - Volume 3: IVAPP, (2017).

3. WAVE: A 3D Online Previewing Framework for Big Data Archives, SEI Tagung, KIT, Karlsruhe - 3th-5th April 2017.

4. An Online Big Data Catalogue, Scientists Seminar of the ANKA Imaging Group, KIT, Karlsruhe – 1st August 2017.

1. WAVE: Visualisation Service

Before

After

1. WAVE: Visualisation Service

Level 0
256 x 256 x 256

Original size
1536 x 1536 x 1152

1. WAVE: Visualisation Service

Current status:

- Implementation of the final WAVE framework within the BIOMEDISA project. (in progress)

2. Real-time Noise Filtering in CT Volumes

Otsu thresholding:

$$\sigma_{\omega}^2(t) = \omega_0(t)\sigma_0^2(t) + \omega_1(t)\sigma_1^2(t)$$

2. Real-time Noise Filtering in CT Volumes

Entropy: 2.2195

No Filter

Entropy: 1.3766

Mean

Entropy: 1.3982

Sigma

Entropy: 1.5876

Ours

2. Real-time Noise Filtering in CT Volumes

Mean (1.3766)

Sigma (1.3982)

Okada (1.3978)

Ours (1.2322)

2. Real-time Noise Filtering in CT Volumes

Current status:

- We tested our filter on the unidentified fly and the Eucrib data sets.
- To test the robustness of our filter, we will evaluate on more data sets.
- Preparing for a submission to the Pacific Visualisation Conference (PVIS).

3. Virtual Reality

Acknowledgement to Till Bergmann who contributed most of the early works.

3. Virtual Reality

Tag der offenen Tür 2017: Effektiv am KIT. 24th June 2017.

Inspiration from VR Gaming Technology: Deep Immersion and Realistic Interaction for Scientific Visualisation, In Proceedings of the 12th International Joint Conference on Computer Vision, Imaging and Computer Graphics Theory and Applications - Volume 3: IVAPP, (2017).

3. Virtual Reality

Current status:

- We have a proper VR setup (HTC Vive) in my office.
- Our VR setup is mobile and flexibel.
- Two students (Chris and Paul) are building another virtual experiment using the NOVA VR as reference.

4. Data Repository Page (Fossils)

[Overview](#)

Related publication van de Kamp, T., Schwermann, A.H., dos Santos Rolo, T., Lösel, P., Engler, T., Etter, W., Faragó, T., Göttlicher, J., Heuveline, V., Kopmann, A., Mörs, T., Odar, J., Rust, J., Tan Jerome, N., Baumbach, T., Krogmann, L. (2018): Parasitoid biology preserved in mineralized fossils. Journal: xx-xx. doi: xxx

Data Info 55 synchrotron μ CT volumes of mineralized fly pupae with parasitisation events. See method section of related publication for more details

4. Data Repository Page (Fossils)

Current status:

- The design and deployment of the page is ready and finalised.
- The authors are testing the page rigorously.

5. Where do we currently stand?

- Data management system that manages the preprocessing of the visualization input data structure.
- Automatic adaptation on visualization parameter, i.e. opacity, grey value threshold, transfer function, ROI, orientation, ...).
- **Multimodality visualization. (Study a NOVA data set)**
- Using segmented dataset as mask to show partial visualization. (Start from Phillip algo).
- Feature extraction from segmented dataset. (Start from Phillip algo. Use histogram analysis).

- VR activities
- Data Publication Page

Thanks for your attention.
