

Some thoughts on C7/C8 virtualization

Wednesday, June 14, 2023 11:30 AM (30 minutes)

Recently I had a need to run CORSIKA in isolated environment due to its bundling with my legacy code in Python 2.7. To solve this issue I used docker virtualization to build custom CORSIKA docker image and docker-compose for its combination with other services. I would like to share my experience and discuss creation of official C7/C8 docker images provided to community.
