

Identity challenges in a Big Data world

Friday, September 5, 2014 9:40 AM (40 minutes)

Proving who you are is a prerequisite for using computer resources, but the explosion of big data resources has resulted in users who are more likely to be remote and use the resources briefly. This tension has provided the opportunity for fresh solutions that are better suited to modern scientific methods. In this talk, such challenges are presented along with their solutions, using the international laboratory DESY and the dCache software collaboration as motivation.

Presenter: Dr MILLAR (DESY), Paul

Session Classification: Plenary talks
