

Distributed aggregation, analysis and publication of heterogeneous astroparticle data

Thursday, March 26, 2020 5:15 PM (15 minutes)

German-Russian Astroparticle Data Life Cycle Initiative (GRADLCI) is an international initiative aiming at automation of the maintenance of astroparticle-physics data throughout their entire life cycle, which includes gathering, processing, aggregation, analysis, storage and publication of data. In the talk we discuss the current status of software development in the framework of the project.
