

Outreach activities in astroparticle physics at KIT

Wednesday, June 10, 2020 9:30 AM (15 minutes)

With various outreach activities, KIT - in particular KCETA - aims to make astroparticle physics more accessible for everyone, not only high-school students and their teachers but also a broader public.

A wide range of activities, from public lectures, internships and practical activities for students to art meets science projects are therefore part of the repertory.

Some of these activities are also embedded in the programme of national (Netzwerk Teilchenwelt) and global institutions (International Particle Physics Outreach Group / Global Cosmic Group). There are also close links at European level with the APPEC Functional Centre being in Karlsruhe.

In this talk we present an overview of our outreach programme.
